

COMP 2406 Project – Final Submission Grading Outline

The details below outline what would be expected for a project to receive an A/B/C/D.

A (80-100%):

1. All features have been implemented successfully.
2. The interface is well organized and responsive.
3. The system has a solid design that demonstrates understanding of the key concerns of web application development (asynchronicity, scalability, latency, etc.).
4. The system is robust in the sense that it handles bad inputs/requests or other unexpected situations without producing undesirable results.
5. The system uses authorization to ensure users cannot access data that they are not allowed to access.
6. For partner projects, at least two extensions listed in the "Extensions or Additions" list below have been implemented successfully.

B (70-80%):

1. Most of the requirements for 80-100% are met but there are some areas that are lacking. Examples could include:
 - a. Partner project that did not implement any extensions.
 - b. Some features have not been implemented successfully.
 - c. The interface is poorly designed.
 - d. The system design has significant room for improvement.
 - e. The system fails in some cases where bad input/requests are received.

C (60-70%):

1. The system functions overall but is missing significant pieces of functionality or is otherwise poorly implemented.

D (50-60%):

1. The system is missing a large portion of the functionality and is poorly implemented (crashes, obvious bugs, etc.)

Extensions or Additions:

Each extension will be worth ~5% each. More/less may be awarded for impressive/subpar implementations of extensions. Smaller additions will also be given some credit. Examples of suitable extensions or additions:

1. The interface adapts well to varying screen sizes (use the Chrome developer tools 'device toolbar' to test).
2. The interface is very impressive visually.
3. A database is used to store the system's data.
4. Any of the extensions mentioned in the project specifications.
5. Additional extensions that are judged to present a similar level of challenge (provide an argument for this in your report).
